

VM ACCELERATOR

SEE YOUR VMWARE ESTATE. PLAN FASTER. REDUCE RISK.

One view, smarter waves, lower cost.

WHAT IT IS

A lightweight assessment that turns raw VMware and Nutanix inventory into clear migration insight. Built to help infrastructure and cloud teams prioritize work, cut guesswork, and prepare clean waves. It connects to the ReadyWorks observability and automation platform for hybrid infrastructure, so you can move from visibility to orchestration when ready.

HOW IT WORKS

- 1. Connect your data.** Point to one or many vCenter environments, or upload RVTools or Nutanix Collector files.
- 2. Normalize and classify.** See your virtual estate from data centers to hosts to VMs. Separate VDI and Corporate automatically. Surface guest OS end-of-life and compatibility.
- 3. Plan and export.** Group and bundle VMs to drive sizing, scaling, and migration waves. Share outputs with your team.

WHAT YOU GET

- Spin up fast with a free download and 45 days of access.
- View everything in one dashboard, from data centers to individual VMs.
- Classify VMs into VDI and Corporate to focus your plan.
- Flag OS end-of-life and compatibility to lower risk.
- Build wave plans using clear groupings and bundles for sizing and scaling.

PROOF

- Vendor-agnostic platform unifying observability and automation across hybrid infrastructure.
- Security you can trust: RBAC, encryption in transit and at rest, SSO, MFA.
- Policy control and audit logs with support for GDPR and HIPAA.
